

Sebastian River cares about your child's heart health, so we are partnering with Who We Play For to screen athletes with an ECG (electrocardiogram). An ECG, also known as an EKG, can detect issues in the heart that can be missed in a standard physical. Please consider signing up your child for this very important screening.

Here are some Frequently Asked Questions (FAQ) on the program:

The screening is open to all student athletes, students and faculty.

### Why should my child get a cardiac screening?

---

The human body changes during puberty both externally and internally in a variety of ways. One of these internal changes is the structure of the heart. In middle school, student athletes learn how to push their bodies to new levels as they mature and get bigger and stronger. Because of these physical changes and the increased stresses on a student athlete's heart, cardiac screening should be part of a physical at least once while in middle school and once in high school.

A simple cardiac screening can help detect problems before they become major medical issues. While we recommend all student athletes get an ECG, you should definitely be screened if you:

- Compete in high impact sports that increases your heart rate for
- Long periods of time
- Have a family history indicating that there is a heart disease risk
- Get dizziness during athletics
- Experience fainting spells or weakness while participating
- Get shortness of breath that does not clear quickly
- Get chest pain while participating

### How is the cardiac screening done?

---

Cardiac screening can detect a variety of potentially catastrophic genetic diseases. The simplest level of testing is an ECG, which looks at the electrical signals that the heart uses to contract and circulate blood through the body and lungs. An ECG involves placing electrodes on the chest around the heart to record those signals. The test is easy, painless, non-invasive, and takes less than 5 minutes. It does not involve needles, blood work, radiation exposure or sedation. Boys will remove their shirts. Girls should wear a regular bra or sports bra, which will not need to be removed.

A Cardiologist familiar with the student athlete heart will review the ECG, which can detect a large number of heart diseases and electrical disorders such as Hypertrophic Cardiomyopathy (HCM) or thickening of the heart, Long QT Syndrome, Wolff-Parkinson-White Syndrome, Arrhythmia, and Abnormal Right Ventricular Disease and other heart disorders.

### How often do you find a problem?

---

On average 97% of all student athletes have a normal ECG and are considered at low risk for cardiac issues. In about 3% of all athletes, results are inconclusive or suggest something that requires further testing. Most often an Echocardiogram (Echo) is recommended. The Echo is used to get a picture of the heart similar to an ultrasound to look at a baby during pregnancy. The Echo looks for valve and vein structure, muscle thickness, and proper operation of the heart. Most rarely, but most importantly, our statistics show that 1 in 1000 of the student athletes we screen will be flagged as high risk with a severe abnormality on their ECG.

## Will I see the results of my child's ECG?

---

Yes. The interpreted ECGs will be returned to the school within 3 business days with a diagnosis of low risk, follow-up or high risk. A copy of the ECG will be returned as well as information about any potential diagnosis.

## Who reads the ECG?

---

Who We Play For works with trained Cardiologists who have read more than 80,000 student athlete ECGs since 2010. Their Medical Board includes preeminent Cardiologists from across the country who support heart screening. Medical Director Thomas DeBauche, M.D. is among the most experienced cardiologists in the country uniquely qualified to read this unique population – the student athlete. Their experience means more accurate interpretations.

## What if my child needs a follow-up?

---

An abnormal ECG will be flagged as follow up, which means additional testing is needed to see what is causing that abnormality – think of it as a yellow caution light. The diagnosis will include some documentation on what the potential problem might be. We will provide the names and phone numbers of some recommended Cardiologists to visit in your area. Even if your child is flagged for a follow-up, he or she can continue participating in the school's sports program. You'll just need to have your child visit a Cardiologist within 3 months to determine why the ECG came back abnormal.

## What if my child is considered high risk?

---

If your child is flagged as *high risk*, it is like a red traffic light. He or she should not participate in sports in any way (practice, games, scrimmages, etc) until he or she has seen a specialist and received clearance or treatment. If you don't have one already, we will offer the contact information of Cardiologists in your area.

## How much will this cost?

---

Free thanks to a generous donation from The Michael Abt Jr. Have a Heart Foundation! A typical doctor's appointment with ECG normally costs \$100 and up, so we're happy to offer our families this important heart screening at a huge savings.

## Isn't this covered with the annual physical?

---

The annual physical exam asks family history questions, and requires a doctor to listen to the student's heart with a stethoscope. Studies have shown that this is just 1% effective in catching heart issues. Adding ECG screening improves the effectiveness in catching heart issues up to 85%. WWPF's Cardiologists have special training and years of experience with student athlete ECGs, which results in more accurate exams.

## Do we need to do this every year?

---

Cardiac screening should be part of a physical at least once while in middle school and once in high school due to the physical changes and the increased stresses on a student athlete's heart, which occur during that timeframe. If your child is considered low-risk then those are the only two times recommended to get an ECG before adulthood.

## Are boys and girls screened together?

---

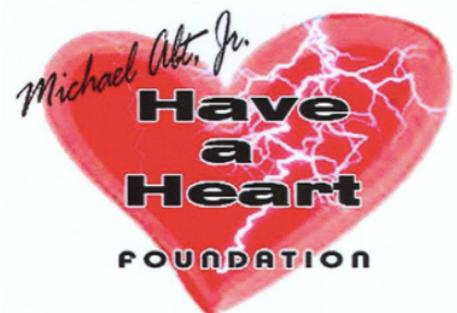

No, arrangements are made for privacy.

## Where can I find out more info or get involved?

---

You can visit [www.whoweplayfor.org](http://www.whoweplayfor.org) or email [evan.ernst@whoweplayfor.org](mailto:evan.ernst@whoweplayfor.org).

## ELECTROCARDIOGRAM SCREEN (ECG) CONSENT FORM AND RELEASE OF LIABILITY

An ECG screen (also referred to as an EKG) can help identify young athletes who are at risk for sudden cardiac death, a condition where death results from an abrupt loss of heart function. An ECG screening may assist in diagnosing several different heart conditions that may contribute to sudden cardiac death.

By signing below, I am electing an ECG screen provided by Sebastian River High School and the Indian River School Board for my child. By electing to receive an ECG screen, I acknowledge the limitations of an ECG screen and that sudden cardiac death or other cardiac events may still occur, despite this screening. I further acknowledge that students with an abnormal ECG screen will be required to undergo further testing (e.g. an echo or ultrasound) and/or a medical consultation prior to being released to resume participation in Sebastian River High School athletics. By my signature below, I hereby release and forever discharge, and waive, any and all claims against Sebastian River High School and the Indian River School Board for, its employees, sponsors, trustees, consultants, volunteers and contractors that relate to my election regarding and/or my child's participation in this ECG screening project. I authorize medical personnel to review the ECG results, and interpret and use the same for diagnostic and aggregated statistical purposes in accordance with the Family Education Rights and Privacy Act and Health Insurance Portability and Accountability Act of 1996.

I DO HEREBY CONSENT to participation in the ECG screening on behalf of my minor child. I understand that it is FREE or that I can donate \$20 per student screened to "pay it forward" so that others can benefit from this endeavor in the future.

Note: **The Michael Abt Jr. Have a Heart Foundation** has provided a generous donation to assist families with the cost of this program if it will in any way be a financial hardship. Please choose one of the options below:

\_\_\_\_\_ We choose to pay the \$20 in full. (Make checks out to Who We Play For)

\_\_\_\_\_ We can afford a partial donation of \_\_\_\_\_. Our donation is enclosed.

\_\_\_\_\_ We would appreciate full financial assistance through The Michael Abt Jr. Have A Heart Foundation.

I DECLINE participation in the ECG screen on behalf of my child.
